

AuraSight

Seeing Beyond
the Incision.

Zero degrees of deviation.

Diverted Context. The surgeon loses spatial reference every time they check a 2D CT/MRI monitor.

“Surgeons simultaneously manage anatomical context, tool position, team coordination, and vitals. Currently, they do this with unaided eyes.”

The Anatomy of AuraSight.

Proprietary AI Logic

Custom fine-tuned YOLOv8 (Tool Detection) +
MediaPipe HandLandmarker (Kinematics) +
SLAM (Spatial Mapping) + DICOM ICP Registration.

Edge Compute Hardware

NVIDIA Jetson Orin / RTX Mobile. No cloud
dependency. Local Wi-Fi 6 for zero-latency
OR processing.

Hardware-Agnostic Inputs

Meta Quest Pro / Magic Leap 2 +
Intel RealSense D435i / Azure Kinect
Depth Cameras.

**Off the shelf hardware
powered by proprietary,
real time computer vision.**

The Software First Paradigm

The Unaided Eye

- Real-time spatial mapping of the entire operative field.

AuraSight Vision

- Pre-op imaging (CT/MRI) superimposed directly into the live operative view.

- Sub-millimeter tool and hand kinematic tracking.

- AI-driven proximity alerts for critical nerves and vessels.

The USP of AuraSight

The current prototype validates core feasibility, running real-time, GPU-accelerated computer vision at 30+ FPS. We have successfully solved live hand-kinematic tracking, tool detection, and novel glove-sensing.

The \$300K CapEx Box vs. Whole-Field Spatial Awareness

Live Spatial Mapping

Superimposes 3D pre-op imaging (CT/MRI) directly onto the operative view

Kinematic Tool Tracking

Sub-millimeter tracking of tools and surgeon hands with AI proximity alerts

SaaS Agility

Deployed via off-the-shelf AR headsets at a fraction of incumbent costs

The India-First Catapult

70-80% Lower R&D Cost

World-class AI/CV
talent building complex
models at a fraction of
US/EU burn rates

**80% SaaS
Gross Margins
at 5x Lower
Burn Rate**

Expedited Regulatory Pathway

CDSCO Class B clearance
is exponentially faster and
cheaper than FDA 510(k)
or CE Mark, accelerating
clinical validation

Explosive Private CapEx

50M+ annual surgical procedures in India,
driven by a \$9B medical tourism boom
demanding tech-forward documentation
without \$300K CapEx friction

“India isn’t just a target market; it is a regulatory and economic catapult enabling rapid clinical validation and global expansion.”

Flight Path to Commercialization

The Builders. Target Founding Team (10 FTE).

THE ASK: ₹1.5 Crore (\$180K) Pre-Seed

For 8–12% Equity.

- ₹60L — Core Team (4 FTE, 6 months runway)
- ₹40L — Hardware (Depth cameras, AR headsets)
- ₹25L — CDSCO Regulatory Filing
- ₹15L — Clinical Pilot Setup
- ₹10L — IP Filing (2 Provisional Patents)

THE EXIT HORIZON: VB Spine's acquisition of Augmedics in 2026 validates the direct acquisition path for whole-field AR navigation platforms.

Thankyou.
